## CONFLICT OF INTEREST POLICY

---

### INTRODUCTION

The potential for conflict of interest and bias exists when professional judgment concerning a primary interest (such as patients' welfare or the validity of research) may be influenced by a secondary interest (such as financial gain). Perceptions of conflict of interest are as important as actual conflicts of interest. Objectivity and integrity of a researcher may be adversely affected if they have interest which will affect the results and conclusion of a research. It also affects the journal which publishes the research article.

### 1 Conflict of Interest

Financial relationships (such as employment, consultancies, stock ownership or options, honoraria, patents, and paid expert testimony) are the ones most often judged to represent potential conflicts of interest and thus the most likely to undermine the credibility of the journal, the authors, and science itself. Other interests may also represent or be perceived as conflicts, such as personal relationships or rivalries, academic competition, and intellectual beliefs.

Authors should avoid entering into agreements with study sponsors, both for-profit and non-profit, that interfere with authors' access to all of the study's data or that interfere with their ability to analyse and interpret the data and to prepare and publish manuscripts independently when and where they choose. Policies that dictate where authors may publish their work violate the principle of academic freedom.

The Critical Care and Resuscitation Journal requires authors to declare if there are any conflict of interests present. This is mandatory information which Authors must provide when submitting an article. This must also be declared on the last page of every published article.

All authors submitting articles to the Critical Care and Resuscitation must submit a Critical Care and Resuscitation Conflict of Interest form
