RESEARCH ETHICS POLICY

INTRODUCTION

The Critical Care and Resuscitation Journal retains the right to reject any manuscript due to unethical conduct in either human or animal studies.

1 Human Research

For research involving human experiments, the article must include a statement that ethical approval was obtained (or a statement that ethical approval was not required and why), including the name of the ethics committee(s) or institutional review board(s), the number/ID of the approval(s), and a statement that the participants gave informed consent before taking part (or a statement that consent was not required and why).

Authors should also state that the study conformed to the provisions of the Declaration of Helsinki (as revised in Edinburgh 2000), available at: <https://www.wma.net/what-we-do/medical-ethics/declaration-of-helsinki/doh-oct2000>.

In line with the recommendations of the World Health Organization and the Declaration of Helsinki, clinical trials should be prospectively registered before participants are enrolled. Clinical trial registration numbers should be included in all papers that report on clinical trials.

Where illustrations include recognisable individuals, living or deceased, great care must be taken to ensure that consent for publication has been given. Patient anonymity should be preserved. Photographs should be cropped sufficiently to prevent human subjects from being recognised, and (at a minimum) the eyes and eyebrows must be masked using coarse pixilation to make the individual unrecognisable.

2 Animal Research

When reporting experiments on animals, authors should indicate the institutional and national standards for the care and use of laboratory animals were followed.

Further guidance on animal research ethics is available from the International Association of Veterinary Editors' Consensus Author - Guidelines on Animal Ethics and Welfare.

Where necessary, the editor reserves the right to request additional information in relation to experiments featured in a manuscript.
